# AZ-104T00A Administer Azure Resources

Administer Azure Resources Introduction

Configure Azure Resources with Tools

Configure Resources with ARM Templates

Lab 03a - Manage Azure resources by Using the Azure Portal
Lab 03b - Manage Azure resources by Using ARM Templates
Lab 03c - Manage Azure resources by Using Azure PowerShell (optional)
Lab 03d - Manage Azure resources by Using Azure CLI (optional)

Configure Azure Resources with Tools

Configure Azure Resources with Tools Introduction
- Compare Administration tools (4 student topics)
- Demonstration – Azure Portal
- Demonstration – Azure Cloud Shell
- Demonstration – Working with PowerShell locally (optional)
- Demonstration – Azure CLI (optional)
- Summary and Resources

Compare Administrator tools

Azure Portal

- View and manage resources
- Visual interface
- Unified hub – training and documentation
- Personalize your experience
- Mobile app
- Access the Cloud Shell
- One-off creation scenarios

Azure Cloud Shell

Welcome to Azure Cloud Shell

Bash | PowerShell

- Interactive and browser-accessible
- Offers Bash or PowerShell
- Authenticates automatically
- Provided on a per-session and per-user basis
- Temporary - times out after 20 minutes

Azure PowerShell and CLI

```
az vm restart -g
MyResourceGroup -n MyVm
```

- Command line programs
- Interactive and scripting modes
- Cross-platform
- Good for repeatable deployments
- Familiar coding experience

Demonstration – Azure Portal (optional)
Help and keyboard shortcuts
Customizing your experience

Demonstration – Cloud Shell (optional)
Configure the Cloud Shell
Experiment with Azure PowerShell
Experiment with Bash shell
Experiment with the Cloud Editor

Demonstration – Working with PowerShell (optional)
Install the Az module
Install NuGet (if needed)

Trust the repository
Connect to Azure and view your subscription information

Create resources

Demonstration – Working with the CLI (optional)
Install the CLI

Verify the CLI installation
Login to Azure

Create a resource group

Verify the resource group

Summary and Resources – Configure Azure Resources with Tools

Knowledge Check Questions	Microsoft Learn Modules (docs.microsoft.com/Learn)

Manage services with the Azure portal (Sandbox)

Introduction to PowerShell (Sandbox)

- -

Control Azure services with the CLI (Sandbox)

- -

Control and organize Azure resources with Azure Resource Manager

- -

A *sandbox* indicates a hands-on exercise.

Configure Resources with ARM Templates

Configure Resources with ARM Templates Introduction

Review ARM Template Advantages
Explore the JSON Template Schema

Explore the JSON Template Parameters

Consider Azure Bicep Templates

Demonstration – QuickStart Templates

Demonstration – Run Templates with PowerShell (optional)

Summary and Resources

Review ARM Template Advantages

Improves consistency and promotes reuse

Reduce manual, error prone, and repetitive tasks

Express complex deployments

Express requirements through code

Provides validation tasks

Modular and can be linked

Simplifies orchestration
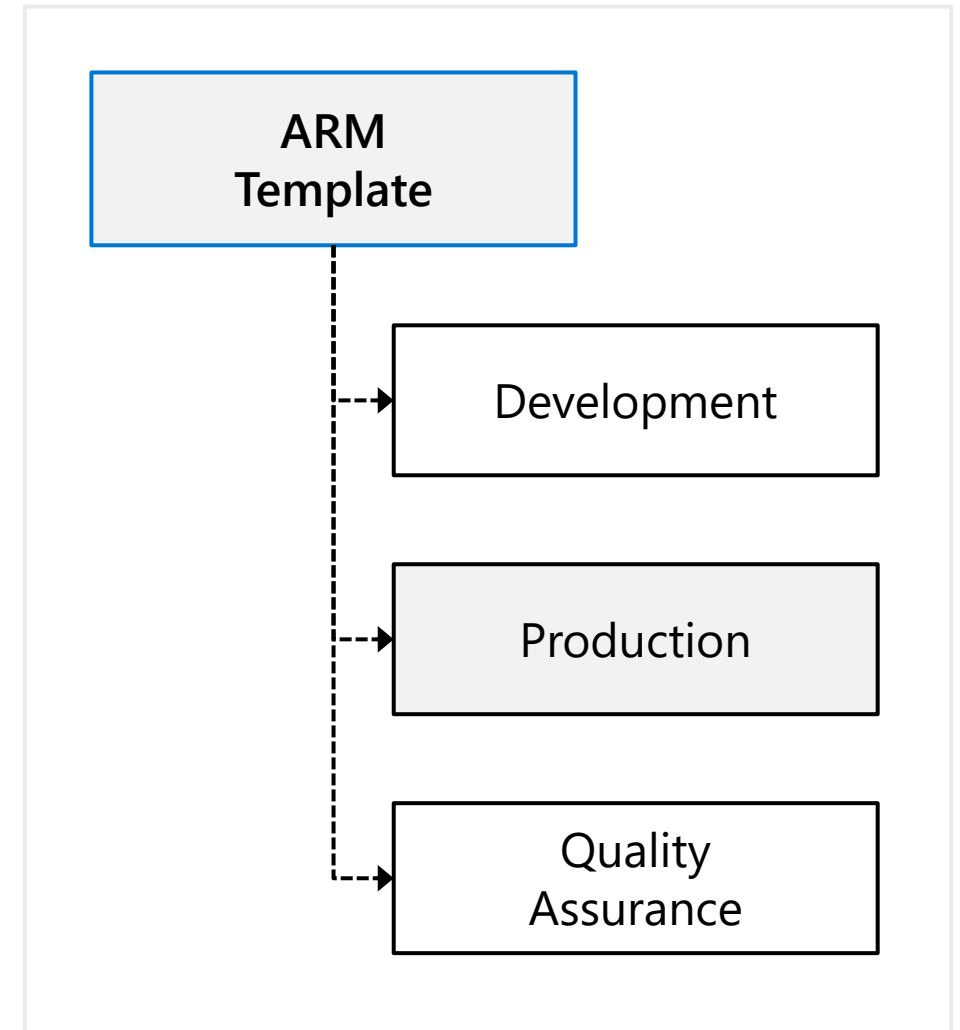

Explore the JSON Template Schema

Defines all the Resource manager resources in a deployment

Written in JSON

A collection of key-value pairs

Each key is a string

Each value can be a string, number, Boolean expression, list of values, object

```
{
    "$schema":
        "http://schema.management.
        azure.com/schemas/2019-04-
        01/deploymentTemplate.json#",
    "contentVersion": "",
    "parameters": {},
    "variables": {},
    "functions": [],
    "resources": [],
    "outputs": {}
}
```

Explore the JSON Template Parameters

Specify which values are configurable when the template runs

This example has two parameters: one for a VM's username (adminUsername), and one for its password (adminPassword)

```json
"parameters": {
  "adminUsername": {
    "type": "string",
    "metadata": {
      "description": "Username for the VM."
    }
  },
  "adminPassword": {
    "type": "securestring",
    "metadata": {
      "description": "Password for the VM."
    }
  }
}
```

Consider Azure Bicep Templates

Simpler syntax for writing templates
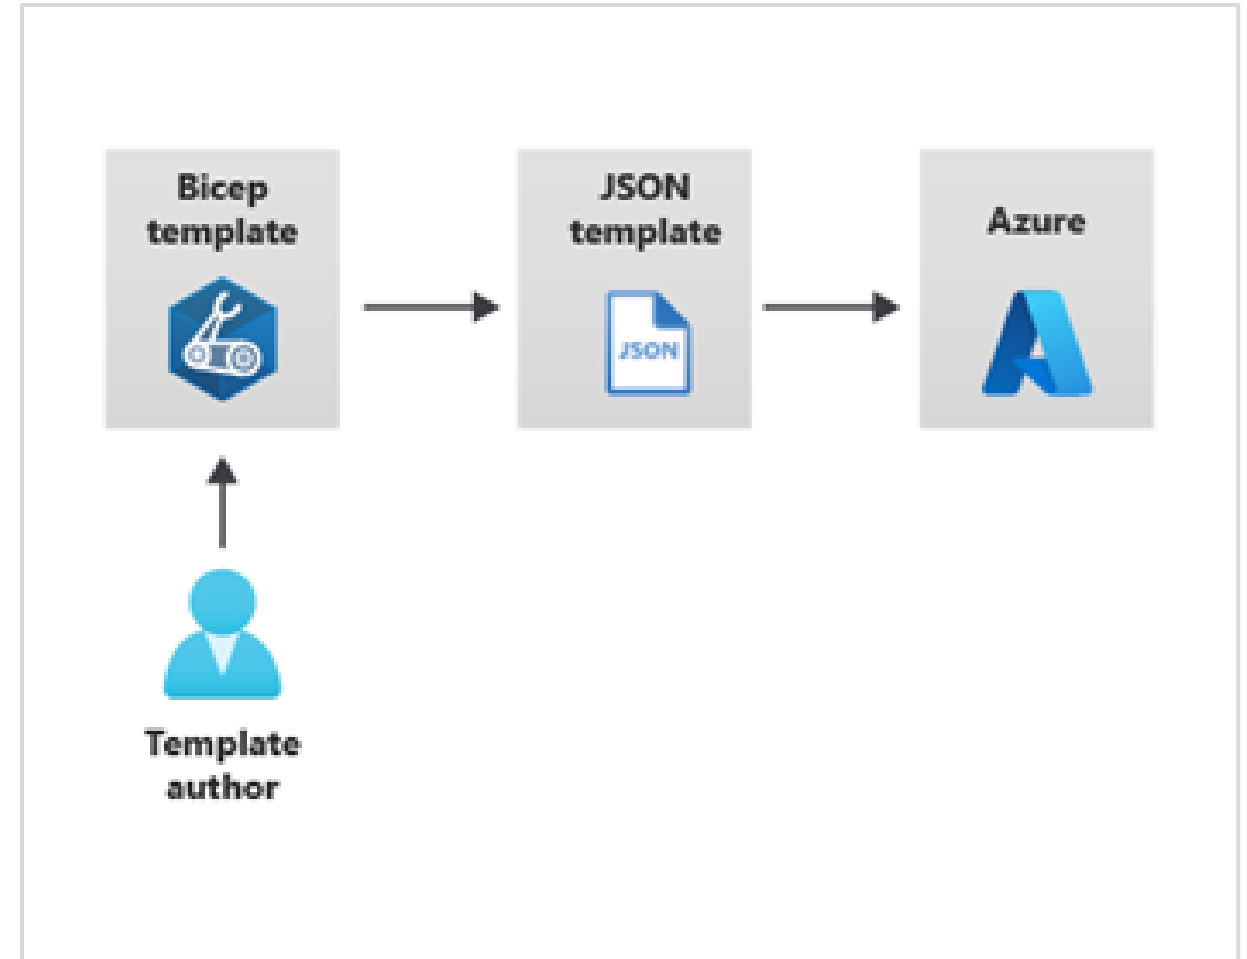

Smaller module files you can reference from a main template

Automatically detect dependencies between your resources

Visual Studio Code extension with validation and IntelliSense

Demonstration - Quickstart templates

Lab 03a - Manage Azure resources by Using the Azure Portal
Lab 03b - Manage Azure resources by Using ARM Templates
Lab 03c - Manage Azure resources by Using Azure PowerShell (optional)
Lab 03d - Manage Azure resources by Using Azure CLI (optional)
Lab 03a – Manage Azure resources with the Azure portal

Lab scenario

You need to explore the basic Azure administration capabilities associated with provisioning resources and organizing them based on resource groups, including moving resources between resource groups. You also want to explore options for protecting disk resources from being accidentally deleted, while still allowing for modifying their performance characteristics and size

Objectives

| Task 1:	Task 2:	Task 3:
Create resource groups and deploy resources to resource groups	Move resources between resource groups	Implement and test resource locks

Next slide for an architecture diagram ⊙→

Lab 03b – Manage Azure resources with templates

Lab scenario

Now that you explored the basic Azure administration capabilities associated with provisioning resources and organizing them based on resource groups by using the Azure portal, you need to carry out the equivalent task by using Azure Resource Manager templates

Objectives

Task 1:
Review an ARM template for deployment of an Azure managed disk
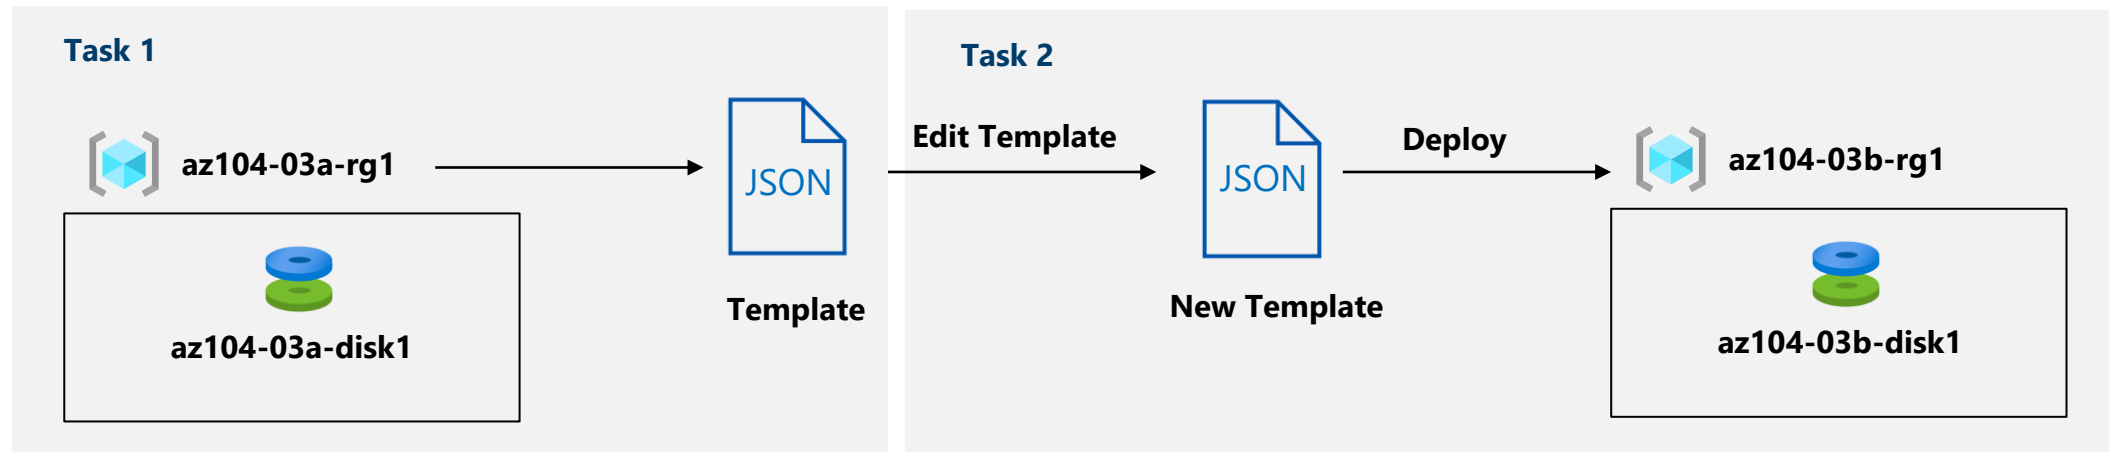

Task 2:
Create an Azure managed disk by using an ARM template

Task 3:
Review the ARM template-based deployment of the managed disk

Next slide for an architecture diagram ⊙→

Lab 03b – Architecture diagram

Lab 03c – Manage Azure resources with PowerShell (optional)

Lab scenario

Now that you explored the basic Azure administration capabilities associated with provisioning resources and organizing them based on resource groups by using the Azure portal and Azure Resource Manager templates, you want the equivalent tasks with Azure PowerShell. To avoid installing Azure PowerShell modules, you will leverage the Azure Cloud Shell

Objectives

Task 1:	Task 2:	Task 3:
Start a PowerShell session in Azure Cloud Shell	Create a resource group and an Azure managed disk with Azure PowerShell	Configure the managed disk by using Azure PowerShell

Next slide for an architecture diagram ⊙➔

Lab 03c – Architecture diagram

Lab 03d – Manage Azure resources with the Azure CLI (optional)

Lab scenario

Now that you explored the basic Azure administration capabilities associated with provisioning resources and organizing them based on resource groups by using the Azure portal, Azure Resource Manager templates, and Azure PowerShell, you need to carry out the equivalent task by using Azure CLI. To avoid installing Azure CLI, you will leverage Bash environment available in Azure Cloud Shell

Objectives

Task 1:
Start a Bash session in Azure Cloud Shell

Task 2:
Create a resource group and a managed disk by using Azure CLI

Task 3:
Configure the managed disk by using Azure CLI

Next slide for an architecture diagram ⊙→
